

TSB NO.246
DATE: 04 / 11 / 2001

Uniden® PRC
Private Radio Communications

TECHNICAL SERVICE BULLETIN

TO: All RELM / Uniden PRC Communication Dealers,
Distributors and Warranty Service Stations

REFERENCE: SMU250KTST

SUBJECT: Trident Controlled Trunking Systems

GENERAL: It has been brought to our attention that our SMU250KTST mobile has intermittent access on UHF Trunking Systems that use Trident Controllers. After researching and testing, engineers have discovered that they needed to lengthen the preamble data from 100ms to 165ms. This has been accomplished with the latest firmware update version 2.13.

All future production will include this latest version.

Upgrading to 2.13: If you desire you can upgrade by using the cloning method, or by using the program provided by RELM Wireless.

WARRANT INFORMATION: No warranty procedures are necessary with this TSB.
